What's New in Argos 6.10?

Evisions is pleased to announce the release of Argos version 6.10, which includes the following changes:

Argos Enhancements:

- Argos now supports single sign-on and authentication through SAML servers.
- Users who are members of multiple groups can now choose which group's settings should be used.

Argos Resolved Issues:

- Replacing text with variables in the SQL editor was causing Argos to crash.
- Additional enhancements and resolved issues.

MAPS Enhancements:

- MAPS Config now supports single sign-on and authentication through SAML servers.
- Added the option to enable primary group selection for Argos users.
- When single sign-on is required, the eLauncher sign in screen will now hide the username and password fields.

MAPS Resolved Issues:

- Resolved an issue where CAS and SAML synchronized users were being prompted to change the password of the associated MAPS user.
- Additional resolved issues.

We appreciate the feedback received from all of our users. Our products would not be what they are today without your continued support. If you have any comments or suggestions, please do not hesitate to open a HelpDesk ticket and let us know.

MAPS and Argos Updates

Some of the changes in this release require an update to MAPS as well as to Argos. We recommend upgrading both products to the latest versions concurrently.

Product versions

The latest versions of MAPS and Argos included in this release are:

- Argos mapplet 6.10.0.2107 / Argos client 6.10.0.2509 / Web Viewer 6.10.0.15
- MAPS service 6.10.2.2678 / MAPS Config 6.10.2.1495 / eLauncher 6.10.0.4

Installation

1. Prepare test environment and ensure current backup

We highly recommend installing updates in a test environment before applying them to your production environment. You should make sure that a current backup is available in case of any unforeseen issues. To create a full backup of your MAPS environment, go to the **Server** -> **Backups** screen in MAPS and click **Backup Now**.

2. Check for updates

Click the **Check for Updates** button in the MAPS Config application to view available updates.

It is possible to apply updates when users are on the system; however, to avoid the possibility of losing unsaved work we recommend applying updates during off hours.

3. Allow update process to complete

When applying updates to the MAPS service you will be temporarily disconnected from the server:

Attempting to reconnect				
Your connection with the server has been lost.				
Attempting to reconnect to the server. If you wish to cancel the reconnection attempt then all open forms will be closed and any pending changes will not be saved.				
Reconnect in 8 seconds				
Status: Waiting to connect				
Connect Now				

The update process may take a few minutes to complete. **Do NOT cancel the reconnection attempt or manually restart the server.** You will automatically be reconnected to the server once the update has been applied.

4. Verify the latest version is installed

To ensure that you are on the most current version, continue clicking the **Check for Updates** button and applying the updates until no new updates are available.

Please Provide Us with Your Feedback!

As always, we welcome any <u>feedback or suggestions</u> you may have. We very much appreciate your thoughts and suggestions, so please keep the great ideas coming!

Primary Groups

The **Primary group** option allows users to define which security group's settings they'd prefer to use each time they sign in to Argos. This can be useful when a user belongs to multiple groups but wants to specify explicitly which group's security rules should be used.

Enabling Primary Groups in MAPS Config

To enable the use of primary groups, navigate to the Groups tab in MAPS Config and locate the **Primary group selection** dropdown found near the bottom of the window.

Navigation	💋 Refresh 🔧 Add 🌺 LDAP 🖟	Copy 🧮 Edit 🗙 Delete
Applications		
🗄 Auditing & Data War	Group Name 🔺	Description
Data Connections	3ESQLADMIN	3E SQL development Admin team

	Primary group selection: Disabled	~
	Disabled	
Debug Check for	Updates Enabled Require user	to choose

This dropdown controls the visibility of the Primary group dropdown in Argos and the Argos Web Viewer. The options in this menu are:

- Disabled the Primary group dropdown will not be visible to Argos users. This is the default setting.
- Enabled the Primary group dropdown will be visible to Argos users, though a group selection will not be required.
- **Require user to choose** users will be required to choose a primary group upon signing in, if one has not already been selected.

Require Users to Choose

If a MAPS administrator has selected **Require users to choose** from the **Primary group selection** in MAPS Config, then the Argos user will be prompted to choose their primary group upon signing in.

Select Primary Group for Data Connections			
This MAPS so primary grou may change	erver requires you to select a primary group for use with data connections. up controls which security settings are used when connecting to the databas your primary group at any time using the dropdown in the upper right.	The se. You	
	Campus A Campus B Campus C	<u>H</u> elp	

Under this selection the **None** option will not be available in the **Primary group** dropdown in Argos.

The Primary Group Menu

Once enabled in MAPS Config, the **Primary group** dropdown menu can be found to the right of the main Argos toolbar.

					—	×
CO-OP	Support	? Help	Sign Out	Primary group for data connections <none> <none> Campus A Campus B Campus C</none></none>		3

Note: Even when enabled, this menu will only be visible if the user belongs to two or more groups (not including the Everyone group).

Data Connections

Primary groups work in conjunction with data connections. MAPS will attempt to use a primary group's sign in credentials rule when connecting to a data source. If a group does not exist in the User/Group Rules list, then MAPS will select a rule based on your existing groups from the User/Group Rules list.

Note: User rules (if any) will take priority over the rules associated with the primary group.

Example: In the image above the Finance group is selected. This group's sign in credentials rule is defined as **Use the MAPS user name and password**. So, when the Finance group is defined as a user's primary group in Argos, connecting to this data source will only follow the sign in credentials rule associated with the Finance group, instead of selecting one at random from all groups listed in the User/Group Rules list.

Selecting a Primary Group in the Argos Web Viewer

To select a primary group in the Web Viewer, first click the **Settings** button in the upper right corner of the screen:

Just like in the Argos client, the Web Viewer's **Primary Group** dropdown will only be visible when enabled in MAPS Config, and if the user belongs to two or more groups, excluding the **Everyone** group.

Settings	
Password Click here to change your password.	Change Password
User Home You do not have a home folder. Set <root></root> as your home folder?	A Set Home
Primary Group * Choose the group used to run queries.	Select a group ~
•	≁ Close

If these conditions are met, the Primary Group dropdown menu will be located on the bottom of the Settings dialog.

Argos 6.10 Release Notes

Argos Mapplet 6.10.0.2107 / Argos Client 6.10.0.2509 / Web Viewer 6.10.0.15 MAPS Service 6.10.2.2678 / MAPS Config 6.10.2.1495 / eLauncher 6.10.0.4

Argos
