What's New in Argos 6.6.0?

Evisions is pleased to announce the release of Argos version 6.6.0, which includes the following changes:

Enhancements:

- New ScheduleEvent and ScheduleEventProperty tables have been added to the Data Warehouse for On Success and On Error email information within schedules.
- The Data Warehouse dashboard on the Evisions Co-Op has been updated to reflect the new functionality on the Schedule tab, which includes results for To and From email fields for both the On Success and On Error events, in addition to the email task.
- Added support for Microsoft Edge Chromium.
- Added support for Home and End keyboard shortcuts in the folder list and navigation dropdown menus in the Web Viewer.
- Various performance and accessibility improvements.

Resolved Issues:

- The nonfunctional **Font** > **Orientation** property from the Properties pane of the Crosstab Report Editor has been removed.
- Attempting to replace text using the Find/Replace functionality in the object SQL editor no longer causes Argos to crash.
- Additional enhancements and resolved issues.

We appreciate the feedback received from all of our users. Our products would not be what they are today without your continued support. If you have any comments or suggestions, please do not hesitate to open a HelpDesk ticket and let us know.

Argos Updates

If you have not already updated MAPS to the latest version, we recommend doing so before or concurrently with Argos.

Product versions

The latest versions of Argos included in this release are:

- Argos mapplet 6.6.0.1965 / Argos client 6.6.0.2317 / Web Viewer 6.6.0.76

Installation

1. Prepare test environment and ensure current backup

We highly recommend installing updates in a test environment before applying them to your production environment. You should make sure that a current backup is available in case of any unforeseen issues. To create a full backup of your MAPS environment, go to the **Server** -> **Backups** screen in MAPS and click **Backup Now**.

2. Check for updates

Click the **Check for Updates** button in the MAPS Config application to view available updates.

It is possible to apply updates when users are on the system; however, to avoid the possibility of losing unsaved work we recommend applying updates during off hours.

3. Allow update process to complete

The update process may take a few minutes to complete.

4. Verify the latest version is installed

To ensure that you are on the most current version, continue clicking the **Check for Updates** button and applying the updates until no new updates are available.

Please Provide Us with Your Feedback!

As always, we welcome any feedback or suggestions you may have. We very much appreciate your thoughts and suggestions, so please keep the great ideas coming!

Argos 6.6.0 Release Notes

Argos Mapplet 6.6.0.1965/ Argos Client 6.6.0.2317/ Web Viewer 6.6.0.76

Argos

Enhancements

Area	Description	Issue number
Accessibility	The non-focused highlight color used in the Content pane of the Web Viewer is now gray instead of blue, increasing its contrast with the red font used for broken shortcuts.	AR-6310
Accessibility	Added support for Home and End keyboard shortcuts in the folder list and navigation dropdown menus in the Web Viewer.	AR-6313
Accessibility	Pressing the down arrow key while on the last item in a list no longer returns focus to the top of the list.	AR-6743
Browser Support	Support for Microsoft Edge Chromium.	AR-6282
Scheduling	Added ScheduleEvent and ScheduleEventProperty tables to the Data Warehouse for On Success and On Error email information within schedules.	AR-3399

Resolved Issues

Area	Description	Issue number
Accessibility	DataBlock and report details in the Web Viewer were not read in a consistent order when using a screen reader to navigate.	AR-6331
Accessibility	Using the space bar to toggle the sort direction in the content pane of the Web Viewer was causing some browsers to incorrectly scroll down the page.	AR-6315
Accessibility	When using the arrow keys to move up or down in the Content Pane of the Web Viewer, the browser would sometimes scroll farther than intended.	AR-6316
Accessibility	The focus indicator was not visible on dashboard names in the Web Viewer's breadcrumb trail.	AR-5121
Charting	Line and point charts in Argos Web Viewer will now display "No Data Available" when no value is selected, instead of the "Cannot read property 'length' of null" error message.	AR-6113
Charting	Web Viewer charts that were dependent upon another chart for their data were rendering before any values had been selected in their parent chart(s).	AR-5103
Crosstab Reports	Removed the nonfunctional **Font** > **Orientation** property from the Properties pane of the Crosstab Report Editor.	AR-6043
Queries	Attempting to replace text using the Find/Replace functionality in the object SQL editor caused Argos to crash.	AR-6740
User Interface	Listboxes used in Firefox or Chrome browsers, where both horizontal and vertical scroll bars were present, were experiencing undesired flickering when scrolled to the bottom of the list, making item selection impossible.	AR-6464

Getting Help

For information on using the software, please refer to the in-product Help, which contains detailed information on all aspects of the product.

If you are having problems with the installation or configuration, you can search our support site, which includes a knowledge base of common issues. If you are unable to find the solution, submit a HelpDesk request with a detailed explanation of the problem you are experiencing.

Please do not hesitate to contact the Evisions HelpDesk if any questions or problems arise. We are here to help you and want to ensure your success.

If you find that areas of this documentation could benefit from additional detail or clarification, please let us know. We are constantly trying to improve the installation process to make it as easy as possible.
